Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

1. The disclosure should be carefully reviewed and ensure that any and all grammatical, idiomatic, and spelling or other minor errors are corrected.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Xi (U.S. pat. No. 6,617,833).

With regard to claims 1-3, Xi (i.e., Fig. 2) shows an electronic device comprising a voltage regulator including a reference voltage circuit (V_{ref}), a voltage source (V_{DD}), an output terminal (OUT), a voltage divider (R1-R2), an error amplifier circuit (MP1, MP2, MN1, MN2, MN3, MN4) for outputting a signal based on the output of the voltage divider and the output of the reference voltage circuit, an output transistor (MP3) connected between the voltage source and the voltage

divider and being switched ON/OFF based on the output signal of the error amplifier, a current adding circuit (S1, 14, CD) for controlling an operating current of the error amplifier based on the output voltage of the output terminal and the voltage of the voltage source (col. 4, lines 29-39) by increasing the operating current of the error amplifier when the output voltage is higher than a predetermined value (col. 3, lines 59-62).

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Melbert (U.S. Pat. No. 4,731,574), Hosono et al. (U.S. Pat. No. 5,828,206), Ursino et al. (U.S. Pat. No. 5,945,819), Marty et al. (U.S. 2002/0093322) and Agari et al. (U.S. 2004/0130305) also disclose electrical devices each of which comprises a voltage regulator including substantial elements as recited in the claims of the instant application.
